Office Action Summary	

U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No.

Application/Control Number: 10/018,597

Art Unit: 1711

#### DETAILED ACTION

#### Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10, drawn to the condensation of polyamides, classified in classes 525
     and 528, subclass various.
  - II. Claims 11 and 17 drawn to the use of a block copolymer as compatibilizer, i.e., a three-component blend, classified in class 525, subclass various.
- III. Claims 12-16, drawn to an additive, classified in classes 525 and 528, subclass various.
- 2. The inventions are distinct, each from the other because:

Inventions II and III are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a molding or coating composition in and of itself without the presence of additional ingredients, which would react in-situ to produce a mutually exclusive final product, and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior

Application/Control Number: 10/018,597 Page 3

Art Unit: 1711

art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

- 3. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are independent of each other in that group I is directed to the condensation of polyamides and group II is directed to a compatibilized blend.
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
- 6. During a telephone conversation with Mr. Leslie S. Szivos on August 18, 2003 a provisional election was made with traverse to prosecute the invention of group II, claims 12-16. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-11 and 17 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Application/Control Number: 10/018,597

Art Unit: 1711

### Claim Rejections - 35 USC § 112

7. Claims 14 and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 14, it is unclear if or how the "further" polycarbonate block distinguishes over the CE and CE blocks.

In claim 16, the objectionable term "obtainable" is indefinite.

## Claim Rejections - 35 USC § 102/103

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. Claims 12-16 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over European 0 415 069.

EP '069 discloses polyamide polycarbonate block copolymers made by admixture of polyamides with carbonate polymers containing carboxyl groups or ester groups capable of elimination to form carboxyl groups, in the presence of a polyepoxy linking agent. The polyamide segment fulfills applicants' P segment, the polyepoxy linking unit fulfills applicants'

Application/Control Number: 10/018,597

Art Unit: 1711

L unit, and the polycarbonate segment fulfills applicants' CE and CE segments. The disclosure of the reference, thus, meets the requirements of the presently claimed additive. The onus is shifted to applicants to establish that the product of the present claims is not the same as or obvious from that set forth by the reference.

Claim 16 is a product-by-process claim and, as such, patentability considerations must be guided by the principles applicable to this claim format. It is well settled that the evaluation of such claims is based on the product rather than on the process steps, i.e., while the claims may recite process limitations, it is the patentability of the product which must be established. In re-Thorpe, 27 USPSQ 964...

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ana L. Woodward whose telephone number is (703) 308-2401. The examiner can normally be reached on Monday-Friday (8:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James J. Seidleck can be reached on (703) 308-2462. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number (702) 305/8183.
